URETERAL STENTS

Introduction and general information

Introduction

On the following pages, we would like to provide you with a comprehensive portfolio of our ureteral stents. Regardless of the indication, you are sure to find the appropriate product here.

Material

Polyurethane (PUR)

All UROTECH ureteral stents are produced from aliphatic polyurethane (PUR) that has been specifically developed for medical applications. Unlike other materials, PUR shows minimal adhesion to blood cells and has a very low-grade inflammatory effect on tissue due to its physical and chemical properties. PUR becomes soft in a moist environment at body temperature, significantly

limiting the risks of traumatic injury to surrounding tissue. Experimental tests and practical experience have shown that PUR is one of the least thrombogenic and most tissue-compatible materials for implantable medical products.

Indwelling time

All UROTECH ureteral stents are approved for long-term use and can remain inside a patient for several months. The additional layer of phosphorylcholine (PC) on the ureteral stents significantly reduces the risk of encrustation and infection. However, due to the heterogeneity of indications and individual differences between patients, regular follow-up examinations should be performed by the treating physician.

Length measurements

In accordance with international norms (ASTMF-1828), the length of our ureteral stents is always indicated without including the J-tip – this equals the shaft length (Fig. 1).

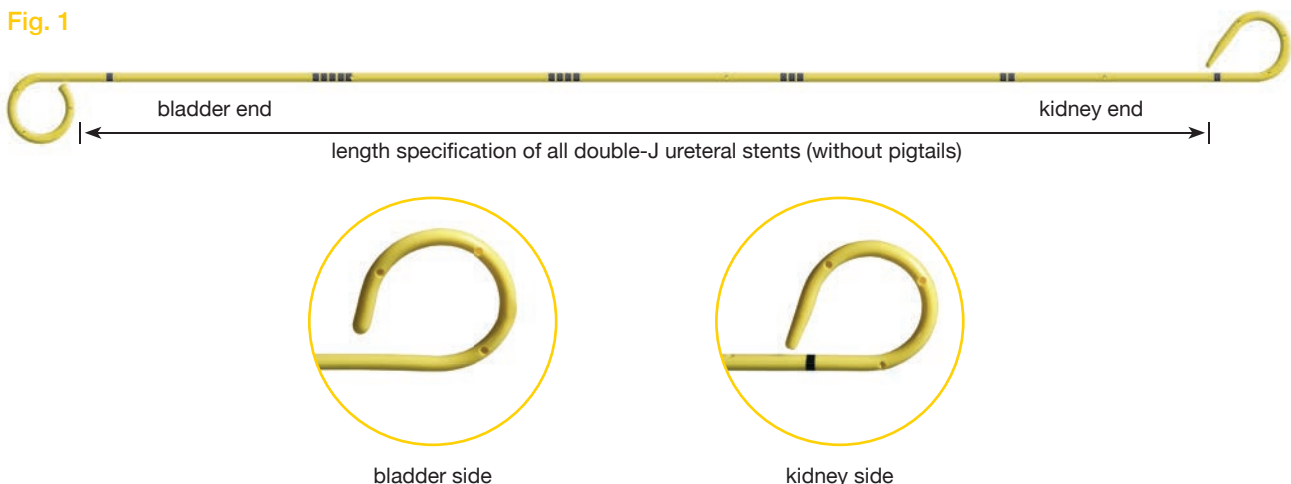

Variations

In addition to our large catalog of standard ureteral stents, you can order many different custom variations based on your clinical needs.

E.g. stents:

- 🔴 with attached suture
- 🔴 without drainage openings in shaft

STONE BASKETS

StoneWrapper®

The high performer of stone extraction baskets...

„StoneWrapper®“

No stone is safe
 Highly technical level for best user convenience: The StoneWrapper is the ideal instrument for complex stone recovery from the most difficult positions.

Perfect for removing concretions of different sizes from hard-to-reach areas of the renal pelvis system comfortably, safely and quickly.

- ◆ Perfect hybrid of grabber and stone extraction basket
- ◆ Elastic, fully articulated three-armed nitinol basket
- ◆ Easy insertion into the lower calyx and quick removal of all concretions
- ◆ Available in two sizes and with two opening options

Effective: work efficiently, save time

The innovative StoneWrapper solves the major challenges involved with flexible ureterorenoscopy: fast and safe atraumatic removal of marginal stones from the renal pelvic system.

STONE BASKETS

The combination of

- ◆ a specially designed three-arm hybrid head (combination of basket and grabber),
- ◆ a new Guide wire technology with high shaft stiffness and hyperflexible distal end,
- ◆ including a Tuohy-Borst adapter and an insertion aid for easy insertion into the endoscope's working channel and as splash guard,
- ◆ a wire design designed for durability and functionality,
- ◆ an ergonomic push handle for fatigue-free working and
- ◆ excellent irrigation for best visibility enables the reliable and fast removal of even the smallest concretions from any position
